Machines

Iberital manufacture a range of Espresso Coffee Machines to cover all modern applications - from small coffee shops to busy airport lounges. For establishments with a small volume of several hundred cups per day and a modest budget, the Junior is ideal. Not only is this machine priced very competitively, it also has a small footprint and will easily fit on any counter top. But don't be fooled - despite its size and cost, this machine will happily make coffee continuously in busy periods of the day.

The **L'anna** is regarded in the trade as a real workhorse. This model has been successfully selling year in year out in the UK for over 12 years. Slightly larger than the Junior, this machine is also priced very reasonably and with its large 14 litre boiler, offers the speed and volume other manufacturers' charge a premium for.

Then we come to the more Stylish looking models. The **L'Adri** is regarded by many as one of the best looking espresso machines on the market. It has the same boiler and groups as the L'anna and holds its own in even the most modern environment.

Finally we come to the **New Expression**. With two boilers so group and steam can be controlled independently, this is the Baristas choice. It has long been believed that the technology in this kind of machine costs up to double that of a traditional machine. Maybe this is what other manufacturers' would like you to believe? Now you can enjoy all the benefits of this machine for a fraction of the cost. Available in an Alto version which accommodates tall take-away cups and in a wide variety of vibrant colours.

We truly believe that within our innovative range of machines is a model to suit every situation that the British caterer encounters today.

New Independent Thermal System

One boiler for the coffee and one boiler for the hot water and steam. This allows the coffee to be brewed at an optimum temperature.

Iberital Expression 2 & 3 Group Fully Automatic
The ultimate barista machine!

A top of the range, fully automatic, machine combining contemporary design with cutting edge, digital technology.

Its imposing presence on your counter top will say a lot about your business and the coffee it serves.

The Expression is designed to produce cup after cup of superb coffee with minimum fuss and absolute reliability.

Iberital is renowned for the quality of its machines and the Expression is no exception. It is built to exacting standards and includes engineer-friendly features (including removable side and front panels) to keep your service and maintenance downtime to an absolute minimum.

Available in a choice of 5 exciting colours, this machine combines real presence with superb performance. For choice of colours see page 5.

- Temperature controlled group heads produce the ultimate espresso with ease
- Distinctive digital display shows date and time, current coffee selection, drinks delivery time (in seconds) for each group and records number of coffees dispensed
- When the machine is not dispensing coffee the digital display shows your company name
- Water intake is clearly displayed to ensure water filters are changed at correct intervals
- Convenient lever operated steam valves
- Designed to heat heat-exchangers by steam only, ensuring accurate temperature control for the perfect espresso – every time!
- Boiler temperature in °C or °F, with adjustable boiler temperature variation (0.5°C, 1°C or 2°C)
- Anti-splash hot water outlet for safer dispensing
- Auto boiler fill and can be programmed to switch on/off automatically

Expression Alto

The Alto (tall) version has exactly the same features as the regular Expression machine but is built to accommodate taller take-away cups. It represents excellent value for money and opens up a new sales opportunity!

Filters

Water Filters are often the last thing you think of, or are forgotten altogether, but they are a key part of ensuring the reliability of your Espresso machine.

Their installation reduces limescale and prevents damage to your expensive Espresso machine by reducing furring and blockages. Overall, we firmly believe that the investment in a water filter will quickly pay for itself. It will reduce service and maintenance costs and prolong the life of your Espresso machine. You also have the added benefit of reducing the problems of taste and odour associated with mains fed water.

Our range of water filters covers all types of beverage and vending equipment; from the smallest installation right up to a 3 group machine and water boilers.

We supply systems from all the leading manufacturers and can advise on the most suitable for your business. We are only a phone call away.

We also are able to regenerate existing calcium treatment units and offer replacement cartridges for the manufacturers detailed in this catalogue.

If you don't see the unit you require give us a call – we are here to help!

Water Filters for Coffee and Vending

In order to serve top quality hot beverages to your customers it is imperative to install quality water filters or calcium treatment units to coffee and vending equipment. Water filters not only protect equipment from the effects of scale but can also dramatically improve the taste and presentation of the final beverage.

Café culture has now become an established part of mainstream British society. Consumers are taking advantage of a confident, experienced coffee sector offering everything from Lattes to Mochas.

As a result of this consumers now demand a very high standard of coffee every time, whenever they want it. In order to provide this, coffee machines must be protected and the coffee product must be premium.

Ensure your customers get the most out of their coffee machines and coffee products by purchasing water filters or calcium treatment units from European Water Care. We offer a range of water filters and ctu's specifically designed to protect coffee machines from the harmful effects of lime scale as well as improve the taste, colour and crema of coffee products.

Everpure has a long tradition of providing quality, innovative products to foodservice. In fact, we're found in more foodservice operations around the world than any other water treatment brand.

We're particularly proud of our success in foodservice, because this market has the highest of standards for quality. Restaurateurs need to keep their operation costs low, and offer quality food and beverages that keep their customers coming back. That's why most turn to Everpure. We're known for quality, and trusted worldwide.

Over the years, we've worked to develop a broad portfolio of products designed to improve even the most challenging of water conditions. Our process of continuous improvement assures that you have the latest, most effective products. From our exclusive quick-change precoat filters, to our combi reverse osmosis systems, to our innovative ESO7 three-stage blending filters, there's a product to ensure your water is managed perfectly and consistently.

BRITA started the professional line of business in 1980.

A filter solution to any water problem and for any application - that is the standard that BRITA Professional has set for itself. This has resulted in the emergence of the PURITY product range over the last few years. The name PURITY is synonymous with the highest level of product safety, simple handling and reliable drinking water optimisation for improvement of drinking water for applications involving food.

PURITY filters are available as large filters and in cartridge format. No more laborious servicing of high-quality machines, as reliably reducing limescale-building ions in the water provides protection against limescale build-up. This increases the lifespan of the machines significantly and saves users' money, unwanted tastes and odours are removed from the water, which then allows the aromas of the beverages and meals themselves to fully develop.

Be it in the fields of coffee, vending, combi ovens, conventional ovens, dishwashing technology or water coolers plumbed to the mains water supply - all over the world customers in the restaurant industry trust in BRITA Professional as the experts when it comes to drinking water optimisation.

Recipe inconsistencies, equipment down time and service calls all threaten customer satisfaction and profit margins, 3M Purification is on hand to provide the water filtration solution for your needs.

98% of your cup of coffee is made up of water – so it stands to reason that for great-tasting coffee, you need to start with pure water. This means using coffee machine filters from someone you can trust.

3M have specific coffee machine filters and systems designed to tackle any problem you may have with your water supply.

For hard water areas we have ScaleGard® Pro, for protection against bacteria and for filtering out unwanted tastes and odours there's our Brew HF range, and then there's our RO (reverse osmosis) system, which removes 96% or more of the total dissolved solids (TDS).

What's more, we have different sizes to cope with anything from the smallest independent coffee shops to larger high street chains with greater volumes.

Grinders

We offer a wide range of Espresso coffee grinders to cover all applications from the smallest home user to the busiest take out bars.

The MC2 and Auto are ideal for the home connoisseur or larger outlets wishing to offer additional coffees like decaff or other special blends.

We also cover all budgets starting with the Cunill range of grinders for the price conscious buyer who still demands an excellent Espresso right up to the Macap MDXL for the buyer wishing to have the most up to date and technically advanced Italian grinder.

Many designs and colours are available to complement your establishment.

For more advice about which grinder is best suited to your needs please call our friendly sales staff who will be happy to help you.

IBERITAL

Recommended for domestic use only

MC2 Challenge Grinders

With specially finished conical blades and low speed (600rpm), all the evocative aroma of fresh coffee beans is retained. There is no better way to start a great cup of coffee.

Constructed from the highest quality materials to ensure maximum reliability and longevity. Challenge grinders are also exceptionally easy to use and the extra strong dosing handle is designed to resist everyday wear and tear.

The manual model dispenses the ground coffee directly into a doser and is ideal for multiple shots.

The automatic model has a built-in timer that grinds exactly the right amount of coffee for each shot. This is more suited to low volume use.

- The best low-volume grinders
- Dimensions: L270 x H375 x W165mm
- Weight: 4.5Kg. Motor: 220V, 60/50Hz - Plug supplied
- Dosing capacity: 130g of ground coffee
- Hopper capacity: 500g of coffee beans
- These grinders are recommended for domestic use only

Code **0347**

Group Head Cleaning Brushes

See p30 for details

Puly Milk daily use ensures the complete elimination of all external and internal milk deposits from any devices used to heat or froth milk. When milk is heated it alters and inorganic material forms deposits on the inside of the steam tube and steam nozzle. These deposits are made of calcium and magnesium salts that include organic fats and proteins which allow bacteria to grow and develop.

Using Puly Milk everyday guarantees milk hygiene safety, increases the quality of steam and the time taken to froth milk and improves the micro-texture of milk foam. Puly Milk leaves no residue and is certified by the NSF as non-hazardous and free from substances which could be harmful for consumers or espresso machines.

Puly Caff Cleaning System

Kit contains:

- Basin for soaking filter holders
- 370g tub of Puly Caff powder
- 100ml bottle of Puly Milk
- Puly Caff group head cleaning brush

Code	Description
8900	Complete Kit
8898	Puly Milk Frother Cleaner 100ml (As Per 0299)
8897	Puly Caff Grp Head Cleaner 370g (As Per 0131)
8907	Puly Caff Basin

Puly Caff daily use guarantees the complete elimination of coffee residues ensuring that the coffee you produce is of the highest quality and free from unpleasant aromas and bitter tastes.

During the roasting process, coffee beans undergo major changes and lipids (oils and fats) are brought to the surface of the bean. These lipids are one of the main elements of the espresso crema. Once they come into immediate

contact with brewing group internal parts (shower, filter and filterholder) deposits start to form. If left, these oils oxidate within 12-18 hours giving coffee drinks an unpleasant and bitter taste. Daily use of Puly Caff removes these deposits.

Puly Caff leaves no residue and is certified by the NSF as non-hazardous and free from substances which could be harmful for consumers or espresso machines.

How to stencil...

Froth the milk to make a fine bubbled foam. Pour the milk into the cup so that it stops just beneath the level of the cup. Rest the stencil on the rim and sprinkle away.

If you then want the foam to rise above the rim you can now pour in a bit more milk at the side.

Alphabet Stencils

Personalise your drinks with our range of coffee stencils. All stencils manufactured from food grade polypropylene. Diameter 120 x 140mm (including handle.)

Bespoke Stencils

Why not have your own stencil made? You could have your very own logo on top of every coffee you make. It's easier than you may think.....

All you need to do is tell us what you would like made into a stencil and we'll do the rest.

Here's a handy guide for producing stencils. This should help you to obtain the best results from your stencils.

- The best stencils are those that are simple, bold, not too detailed
- Avoid lots of text
- Keep designs black and white
- Avoid fine text fonts

- Send artwork as a JPEG, PDF, EPS, PSD or TIFF file – minimum resolution 300dpi

- Please don't send photographs, we need graphics only
